AGILE ENGINEERING & DEVOPS-UNISSANT'S APPROACH

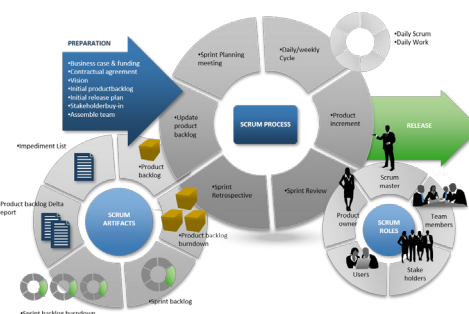

Agile Engineering is certainly not a new concept and DevOps is growing in popularity, so how should organizations think about incorporating these techniques into their environment? The first item to consider is culture. Implementing Agile & DevOps is all about changing the culture of an organization. In some cases, organizations may not be ready to embrace the change—that is just a fact. If you are uncertain as to whether or not your organization is ready—either for Agile Transformation or DevOps, we recommend conducting a maturity assessment to baseline your capabilities. This assessment will provide a foundation that you can then build your execution plan against to achieve iterative successes, while transforming the underlying culture.

Your organization can certainly implement Agile Engineering without DevOps, but definitely can't implement DevOps without Agile Engineering. Unissant provides services in both areas of discipline to provide the most flexibility to our clients. We also work with leading Agile & DevOps platform vendors so that we can provide end-to-end integrated solutions for our clients.

AGILE ENGINEERING

Unissant offers several services to assist organizations in implementing Agile capabilities, including Agile Development, and Agile Transformation services. We believe that focusing on people and process, while bringing in the right technologies to manage the agile development process provide the best success for our clients.

Our comprehensive approach focuses on the roles, processes and artifacts needed throughout the development cycle, with an emphasis on collaboration.

AGILE ENGINEERING & DEVOPS

Unissant provides Agile Engineering & DevOps Solutions that empower our clients to meet their business goals. We have deep expertise in finance, health IT, national security and energy.

Unissant delivers innovative, cost-effective solutions to government agencies and private companies to help them tackle their biggest challenges and achieve mission success.

Unissant also has strategic relationships with leading vendors that provide comprehensive platforms to meet our customers needs.

Founded in 2006, Unissant is a CMMI Level 3 Dev, ISO 9001:2015 and ISO 27000:2013 company, SDB company with offices in Reston, Virginia and San Antonio, Texas. In August 2015, Unissant was named by Inc. magazine as one of the nation's fastestgrowing private companies (the Inc. 5000 List).

Unissant delivers not only Agile Development & Engineering Services to our clients, but we also focus on **Agile Transformation**. We work with organizations that have a desire to embrace Agile practices, but are still developing using a waterfall methodology. We focus on not only identifying the right projects to leverage Agile, but also providing assistance in deploying the right skills, tools & processes to be successful. We work hand-in-hand with our clients to ensure their success.

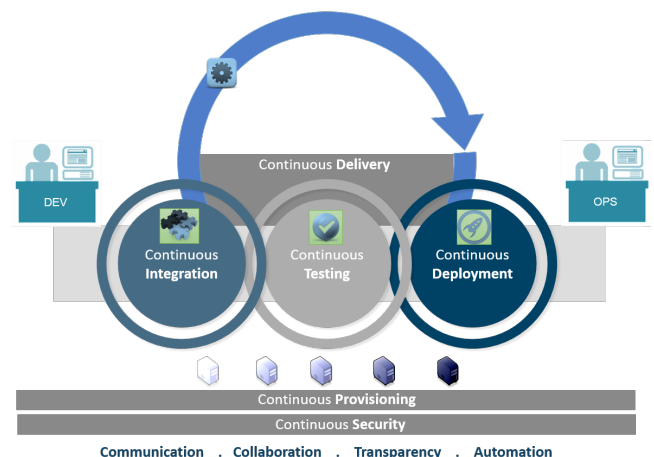

DEVOPS

As many organizations have implemented Agile, they are finding inefficiency in how quickly they can deploy their releases to production. While efficiency was realized in the development process using Agile, the need to focus on gaining efficiency in the entire development and operations processes becomes a critical success factor to building truly efficient delivery & deployment processes.

DevOps is about:

- A culture of continuous improvement to quickly learn and adapt
- Increased Collaboration between Operations & Development Teams
- Improved flow of information and feedback from operations & development teams
- Extreme focus on automation of tools and processes

The value that DevOps brings to an organization is significant, not only in delivering business value faster but also in delivering real cost savings for an organization.

At Unissant, our approach focuses on 3 key concepts: Continuous Delivery, Continuous Provisioning and Continuous Security with a targeted emphasis on the following characteristics: Communication, Collaboration, Transparency & Automation. Unissant delivers DevOps services to our clients using an integrated approach across people, process and technology. We leverage our vendor partnerships to provide the best solution for our clients.

Please reach out to us directly to hear more about our capabilities and how we can make you successful in your Agile Engineering & DevOps initiatives.
